Advanced Facility Inspection Software

EPA regulations require monthly visual inspections at fuel facilities. Titan's Web-based Advanced Facility Inspection module (AFI) makes site inspections both easy and paperless. You own the data and it's all integrated with the cloud.

The Right Solution for Compliance Inspections

The new EPA regulations require fuel sites to perform monthly visual facility inspections. AFI is the right software to meet these requirements and effectively manage your company-wide inspection program. The most trusted technology in the industry with over 150,000 mobile inspections performed at leading fuel retail and commercial locations, AFI ensures that every facility inspection is done right the first time. With AFI, managers have all the facility inspection data they need at their fingertips to improve operations.

Results-Driven

AFI not only makes facility inspections easy, the application is completely configurable to perform multiple types of inspections and adapt to any facility scoring process you wish to put in place. Questions can be weighted for scoring of facilities based on the questions and criteria you chose. Results seamlessly port to the cloud with each facility ranked, graded, and visible to know instantly what specific deficiencies need to be addressed to improve scores or achieve key metrics or KPIs.

Features

- Create Any Inspection Online
- Weight Questions & Score Results
- Rank Facilities and Track Issues
- Results Securely Stored on Cloud

Benefits

- Proactive UST Facility Compliance
- No More Fines or NOVs
- Greater Inspection Efficiencies
- Workflow for Tracking & Resolution

Inspections Online, On-Demand

AFI allows you to convert any PDF or Word document into a dynamic online inspection. EPA, state, or industry forms (e.g. PEI) can easily be set up as paperless inspections using their forms to ensure precise questions are answered and details documented with results embedded on official forms, ready for online submission once completed via smart phone or tablet. AFI is so versatile you'll wonder how you managed your facilities without it.

Scored Results

AFI not only makes facility inspections easy, the application is completely configurable to perform multiple types of inspections and adapt to any facility scoring process you wish to put in place. Questions can be weighted for scoring of facilities based on the questions and criteria you chose. Results seamlessly port to the cloud with each facility ranked, graded, and visible to know instantly what specific deficiencies need to be addressed to improve scores or achieve key metrics or KPIs.

Photo-Finishes

A picture is worth a thousand words when it comes to facility equipment-related issues. That's why AFI is built to allow photos to be paired with inspection answers. Photos are synced and stored with each completed inspection to ensure that issues are not only documented, but corresponding reports include the photos and notes to support inspection results. This ensures a photo-finish to every visual site inspection.

Syncs with Titan Cloud

AFI syncs seamlessly with Titan's industry-standard cloud software. This provides not only the right repository for storing photos and data, but a comprehensive compliance platform for creating and managing all the deficiencies found during these inspections. Activities can be auto-generated based on your pre-established parameters, allowing you to easily track inspection deficiencies through to resolution.
