

Titan Supply & Logistics

Optimize your fuel supply, from terminal to tank.

Titan Supply & Logistics connects supply contracts, dispatching, and delivery reconciliation in one platform—across both private fleets and third-party carriers. Gain greater control over inventory, fuel demand, loads, and deliveries while improving visibility and execution across the supply chain.

Fuel supply complexity creates costly gaps.

Managing contract execution (i.e., pricing and allocations), inventory, carriers, dispatch, deliveries, and reconciliation across disconnected tools makes it harder to lift at the best price, maintain inventory levels, and optimize transport.

Titan Supply & Logistics connects every stage of the fuel supply chain.

Titan brings supply, inventory, logistics, and back-office workflows together so teams can make smarter buying and lifting decisions, forecast demand, automate orders and dispatch, optimize deliveries, and reconcile activity from order to invoice.

MAKE EVERY LOAD MORE PROFITABLE

Lower fuel supply costs by **25–75 bps**

Use contract execution management, best buy with freight consideration, and carrier performance management to improve purchasing decisions and reduce supply costs.

AUTOMATED RECONCILIATION

Order → Delivery → Invoice

Connect order, BOL, delivery, and invoice data to identify exceptions sooner and improve cash flow or credit balances.

Turn supply chain visibility into measurable performance.

Lower fuel & transport costs

Improve fuel buying with best buy, matching demand and inventory levels with the best priced contract based on price, allocations, and freight (own drivers or carriers).

Improve fleet utilization

Optimize loads and routes across drivers and carriers to reduce wasted miles, idle capacity, and delivery inefficiencies.

Reduce runouts & retains

Forecast tank-level demand and automatically schedule the right product and quantities at the right time.

Accelerate reconciliation

Automatically match deliveries, BOLs, and invoices to surface variances, discrepancies, and exceptions faster.

Buy smarter. Deliver better. Reconcile faster.

Titan Supply & Logistics connects planning, forecasting, dispatch, delivery, and back-office workflows to help fuel operators reduce costs, prevent runouts, improve utilization, and keep supply moving efficiently.

Manage the fuel supply chain from plan to payment.

Titan Supply & Logistics connects the workflows behind fuel procurement, forecasting, dispatch, delivery, and reconciliation—helping teams make better decisions and execute more efficiently across every load.

From demand to delivery — connected.

PLAN & BUY

Make smarter supply decisions. Unify contracts, pricing, allocations, freight, and supply options with near real-time demand and inventory level data so teams can better determine when, where, and how to buy fuel.

FORECAST & ORDER

Put the right fuel in the right place. Leverage inventory and demand data from near real-time remote ATG polling to anticipate site needs, reduce manual planning, and create more accurate fuel orders.

DISPATCH & DELIVER

Move more fuel with fewer miles. Coordinate drivers and carriers, optimize loads and routes, and give teams better visibility into delivery execution.

RECONCILE & OPTIMIZE

Close the loop from delivery to payment. Connect operational and financial data to expedite and identify exceptions faster and reduce manual back-office work through automated reconciliation.

Additional capabilities built to manage the details behind every load:

Carrier Management

Track performance and delivery accuracy.

Driver App

Give drivers mobile tools to execute deliveries and confirm tank selection.

Exception Management

Surface delivery, lift, contract, load, and other exceptions that require attention.

Integrations

Connect supply chain workflows with pricing, allocation, invoicing, and back-office systems.

One connected view with Titan Supply & Logistics

Fuel supply decisions are interconnected. Pricing, allocations, freight, and demand affect lifting decisions. Inventory drives orders. Orders drive dispatch. Deliveries drive reconciliation. Titan brings those workflows and data together so teams can move beyond disconnected systems and manual handoffs—giving planning, logistics, and back-office teams a shared view of what was planned, what happened, and what needs attention.

- **Near real-time visibility:** Connect supply, inventory, delivery, and financial activity across the network.
- **Automated workflows:** Reduce repetitive planning, dispatch, and reconciliation tasks.
- **Better decisions:** Use connected data to improve buying, delivery execution, and overall supply chain performance.

Ready to take control of your fuel supply chain?

Connect planning, forecasting, logistics, and reconciliation with Titan Cloud.
