

Titan Compliance

Environmental compliance, simplified.

Reduce risk. Improve efficiency. Stay ready across every site.

Titan Compliance is a best-in-class environmental compliance platform for multi-site fuel operations. Connect tank data, release detection, alarms, inspections, regulatory requirements, corrective actions, documentation, and remediation in one enterprise solution—helping teams identify risk sooner and manage compliance at scale.

Compliance multiplies with every site.

Fuel operators manage far more than monthly testing and reporting. Inspections, alarms, permits, deadlines, regulatory requirements, documentation, vendors, corrective actions, and remediation multiply across locations and jurisdictions.

Disconnected systems make it harder to know what needs attention, who owns the next action, and whether issues are resolved. **Titan Compliance** brings the program together so teams can manage by exception instead of chasing information.

One platform for environmental compliance — from detection to resolution.

Titan connects near real-time site and tank data with the workflows required to monitor alarms and release detection, complete inspections, track permits and deadlines, manage corrective actions and remediation, centralize documentation, and surface risk through dashboards and reporting.

The result: Fewer manual processes, clearer accountability, and a more proactive, scalable compliance program.

Improve compliance performance across every site.

Reduce compliance risk

Identify exceptions sooner, stay ahead of critical requirements, and keep issues visible through resolution.

Increase team productivity

Replace spreadsheets, disconnected systems, and repetitive administration with connected data and automated workflows.

Respond faster

Turn tank data, alarms, inspections, and findings into action before small issues become larger problems.

Control operating costs

Reduce unnecessary dispatches, improve vendor coordination, limit downtime, and make better operational decisions with compliance data.

Stay compliant. Operate with confidence.

Titan Cloud combines enterprise software, connected site data, field execution, compliance expertise, and support to help fuel operators build a more proactive, scalable compliance program.

 TitanCloud™

Manage the entire compliance lifecycle — your way.

Titan connects the data, workflows, and people required to manage compliance across every location—whether it sits with a dedicated team, a cross-functional group, or one person managing it all.

Strengthen your compliance program with these key capabilities:

Release Detection & SIR	Monitor tanks and lines, automate release detection processes, and identify potential leaks and losses earlier.
ATG Terminal & Gauge Programming	Remotely manage gauge programming and ATG configurations with permission-based command controls—reducing truck rolls and enabling secure access from anywhere.
Alarm Management & Triage	Centralize and prioritize ATG alarms, reduce noise, and automatically route critical issues into integrated maintenance workflows.
Facility Inspections + Titan Cloud Go	Complete field inspections with Titan Cloud Go, capture photos and findings on mobile devices, and move data directly into workflows.
Important Dates & Regulatory Tracking	Track critical dates, permits, inspections, violations, regulatory requests, and test results with vendor integrations and custom views that simplify follow-up.
Activities & Corrective Actions	Create, assign, and track compliance activities so ownership and follow-up remain visible through resolution.
Document Management	Centralize permits, test results, inspection records, reports, and supporting documentation in customizable, mobile-friendly views for faster inspections and audits.
Dashboards & Reporting	Turn network-wide compliance data into actionable insights with configurable dashboards, trends, exceptions, and program-level reporting.

Streamlined compliance, from detection to resolution.

Connect field activity, equipment data, regulatory requirements, and follow-up workflows so issues stay visible throughout the compliance lifecycle.

One connected compliance program.

Replace disconnected monitoring tools, spreadsheets, document repositories, and vendor systems with one environment for monitoring risk, managing regulatory obligations, executing field work, documenting compliance, coordinating action, and measuring performance.

With **Titan Compliance**, you can move beyond knowing what happened to managing what needs to happen next.

Ready to simplify compliance across your network?

Connect your compliance data, workflows, and teams with Titan Cloud.
